

Enterprise-class managed public cloud

Tap into the power of leading public cloud platforms like AWS and Azure to unlock unprecedented scalability, performance, and reliability for your business. But why settle for just the basics when you can take it to the next level? Flexential Managed Public Cloud not only brings you all the benefits of a public cloud, but goes further by offering best practices, comprehensive management, ironclad security, and round-the-clock monitoring.

With our team of certified cloud experts, backed by years of experience working with top public cloud providers, we partner with you to seamlessly manage your data and applications. We tailor a public cloud solution that caters to your unique IT needs and aligns with your business goals. Harness our cloud management expertise, enriched by cutting-edge cloud native tools, and experience real-time visibility of your robust, optimized public cloud environment.

Worry-free managed public cloud

Unlike standalone DIY public cloud solutions where enterprises are required to build and manage their environment on their own—Flexential Managed Public Cloud includes management, security, automation, and 24/7 x 365 monitoring of your environment. Customers can also lean on the Flexential team of cloud experts to assist with designing and architecting your environments and assisting with data migrations, risk assessment analysis, and implementation services.

Features

- Expertise in colocation and unmanaged, private dedicated, and hyperscale cloud environments
- In-depth knowledge of Microsoft, UNIX, and Linux operating systems
- Capacity planning and patch management support
- Security, compliance, and change management best practices
- 24/7 monitoring and maintenance support with the best open-source tools available
- Automated security monitoring using cloud native tools

Benefits

- Ideal for enterprises looking to modernize infrastructure and harness all the benefits of public cloud
- Flexential's cloud experts will manage and operate an individualized hyper-scalable public cloud solution to enable your IT transformation
- Gain control over growing IT complexity and speed time to market
- Ability to leverage our Cloud Connect solution from any Flexential cloud or colocation environment

Optimized cloud native solutions

When Flexential Managed Public Cloud is combined with our Managed Containers, this joint solution provides 24x7 Infrastructure management on AWS leveraging native Platform as a Service capabilities. Flexential provides a secure and optimized public cloud environment to protect customer data and valuable intellectual property.

The optimal public cloud environment

Battling with platform management obstacles shouldn't be your biggest impediment to delivering on your strategic growth objectives. When your developers run into complex issues common with running a growing IT environment, Flexential can provide resources that act as a collaborative extension of your team to help alleviate pressure points and increase efficiencies.
